

Who Lives in Your Garden?

Birds? Insects? Mammals? Reptiles? Plants? Where is your nearest birds nest? Where are your nearest stinging nettles? Have you noticed any baby animals?!

Questions to think about:

What can you see or hear?

Where are the best places to look? Why?

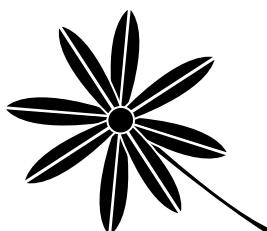

Can you identify the insects/wildlife that you find?

What animals, other than insects, live in your garden? Why?

How do you encourage/discourage wildlife in your garden?

Would you find different creatures at different times of the day/ year?

Note: Please respect all wildlife you find and put them back where you find them.
